

After Installing Thousand's of Countertops Over the Last 15 Years...

Finally, Kentucky Countertop Installer Discovers How To Turn \$40 into \$400 Over and over and over again... on nearly every countertop install... even in "this economy"

Louisville, KY – It took 15 years of doing the same thing as everyone else in the industry before an inventive young man in Louisville Kentucky found a better way... a way to add \$300, \$400 even \$500 pure profit to nearly every countertop install... with this simple \$40 "system."

In the past, countertop installations were limited by the size and weight of the stone. You simply couldn't create the large overhangs clients wanted without the risk of the slab breaking. But now, there is a way to greatly increase the amount of overhang on any countertop – regardless of material being used.

This is a very, very, very profitable advance in countertop installation technology. In fact, we can now show you exactly how to use a new "system" to increase the profit on many of your countertop installation projects. I'm talking about adding \$200, \$300, \$400 or more on each and every job while DECREASING the install time.

Imagine adding \$400 per job over the course of a year... what would that be worth to you? (Just one job a week using this new system could be worth another \$20,000 pure profit.) What would that mean for your business? And what if this system also increased referrals because of how happy your clients are with your new install system. And trust me, once your clients see this system in their homes, they will talk about it to their friends... and you will get referrals. But beyond that, consider...

5 More Reasons Why You Should Be Using the Revolutionary, Patent-Pending I-Brace System...

First... Sell more stone. The I-Brace system allows you to create larger overhangs than are possible with traditional wood corbels. This means you can sell more square feet of granite on every bar-top, peninsula or island counter.

Second... Up to Date Look and Feel. Clients love the "floating" look of the I-Brace system – and they will pay extra for it. Now this is good news because even though your client will pay more for no corbels, the I-Brace system actually costs you less!

Third... Safety. By eliminating corbels your clients are no longer banging knees... and their toddlers are not banging their heads on those hard jagged corbels. It's just the right thing to do for your clients.

Fourth... Saves Install Time. No more worrying about picking up or stocking large, expensive corbels that get scratched up – and then need to be replaced – from rolling around in the back of your jobsite truck. The I-Brace systems installs quickly and easily and takes up so little room, you can keep a whole day's supply of I-Brace systems on the truck without any problem.

Fifth... Increase Usable Counter space. Corbels take up valuable counter space and reduce the useable area of counters by up to 30%.

How To Get A Risk Free Trial of the I-Brace System for Just \$40...

Simply **Call 1-800-575-4401** to speak with a product sales specialist. They will let you know which I-Brace system is right for you based on the type of counter you are installing.

As a bonus, we are also offering a **FREE** report called *How To make More Money By Using the I-Brace System*.
